Bolero 43 D

Price € 2.783,00

Identifier 8.020.560.31001

Description

The Bolero 43D is an innovative beverage dispenser designed to support healthcare professionals in preparing drinks for clients with swallowing difficulties (dysphagia). This advanced machine automates the entire dispensing process, enabling drinks to be served safely, hygienically, and consistently—both hot and at room temperature.

Relieving the burden on care staff, reclaiming time

Thanks to the automatic dosing system of the Bolero 43D, care staff no longer need to prepare drinks manually. This significantly reduces workload and lowers the risk of errors in preparing drinks that must meet specific consistency requirements. As a result, healthcare professionals can fully focus on other important care duties—with greater peace of mind and confidence.

Safe and reliable for clients with dysphagia

The Bolero 43D operates exclusively with specially developed ingredients suitable for individuals with swallowing disorders. This minimizes the risk of aspiration and ensures client safety. Each drink is precisely prepared according to pre-set recipes, ensuring every serving meets the correct thickness, temperature, and the IDDSI standard.

For more information about the available drink options, we recommend contacting the Bravilor Bonamat branch in your country or your local dealer.
